## ARMIN Manual Collection – New Generation

The ARMIN Manual Collection with its own in-house produced AMW11 calibre is presented in its latest execution, displaying many detailed improvements. In the development of the new generation, the focus was on the individual elements of the watch movement, to ensure that the exclusive Armin Strom series includes the state of the art technology. The readapted gear-train guarantees an even higher efficiency level. In order to minimize the power loss within the watch movement, the integration of the escapement has also been improved. As is to be expected of a traditional Manufacture, the hand-finishing of the movement decoration is of the highest quality. The noble, highly attractive dial with its new multi-level structure, offers the watch greater depth. The ARMIN Manual Collection clearly strives for technical and aesthetic perfection in every model and is available in a limited series of the four elements: Earth, Water, Air and Fire.

### TI11-MA.11 MANUAL AIR

Manufacture movement	ARMIN STROM AMW11 calibre Mechanical manual winding, off-centre time displays, small seconds Frequency: 18,000 A/h Jewels: 20 Number of components:112 Power reserve: 120 hours <b>For more info on calibre, see last page</b>
Case	Titanium Sapphire crystal and case back with anti-reflective treatment Diameter: 43.40mm Total height: 13.00mm Water-resistance: 50m
