

## CLASSIC FUSION EXTRA-THIN SKELETON BLACK CERAMIC

In less than a year, it has become one of Hublot's major bestsellers. It has met with phenomenal success all over the world, in Asia, Europe and the United States. **The cornerstone of classic watches at Hublot.** An extra-thin skeleton watch, a Classic Fusion whose design has been refined while retaining the dynamic and modern codes immediately recognisable as Hublot. Unveiled at last year's BaselWorld, initially in King Gold and titanium, its latest incarnation boasts a **very elegant case fashioned entirely from polished, satin-finished black ceramic**: the new Black Ceramic Extra-thin Skeleton Classic Fusion.

With a diameter of 45 mm, this watch is equipped with **Hublot's new CLASSICO movement (HUB1300), entirely designed and developed in the brand's manufacture in Nyon.** At just 2.90 mm thick, it comprises 130 components which are fabulously showcased by the skeleton design – featuring a **resolutely graphic style** - which enables expert eyes to admire the watch's regulating organ, the balance and the escapement. On the dial, it is worth noting that the small second at 7 o'clock and the hands are similar in design to those on the very first Hublot watches: a clever reference to the history of the brand. The assembly is complemented by a strap - black alligator stitched onto rubber - and a deployant buckle which ensure it offers the greatest possible comfort, flexibility and durability. The watch is practical on an everyday level, offering a 90-hour power reserve and water resistance to 50 metres.

Striking a remarkable balance between the classic extra-thin design and Hublot's trademark dynamic and modern "all-black" look, this piece is a fine exercise in style, providing a wonderful demonstration of the **principle of fusion between Tradition and Modernity.**

### TECHNICAL DETAILS

References	515.CM.0140.LR - in ceramic
Case	"Classic Fusion" - Diameter 45 mm - Polished and satin-finished black ceramic
Bezel	Vertical satin-finished ceramic
Crystal	6 H-shaped titanium screws, countersunk, polished & locked
Bezel Lug	Sapphire with interior/exterior anti-reflective coating
Crown	Black composite resin
Case-back	Polished ceramic with Hublot logo
Water resistance	Polished ceramic with sapphire crystal with interior anti-reflective treatment
Dial	5 ATM, i.e. approx 50 metres
Hands	Sapphire with glossy grey transfer Hublot logo in pantone 425/black border
Movement	Anti-reflective coating on topside/underside
Thickness	Black coated, polished indexes
Components	Polished, black coated.
Frequency	CLASSICO HUB1300 hand-wound skeleton
Power reserve	Small seconds at 7 o'clock
Strap	2.90 mm
Clasp	123 (Jewels: 23)
	3 Hz (21,600 Vib/h)
	Approximately 90 hours
	Black alligator stitched onto black rubber, black stitching.
	Black PVD steel deployant buckle, polished and satin-finished.
