THE NEW PERPETUAL CALENDAR "OPEN DIAL" FROM THE WATCH MANUFACTURE ANTOINE MARTIN

ALPNACH, JANUARY 2013. AFTER THE SUCCESSFUL LAUNCH OF THE QUANTIÈME PERPÉTUEL AU GRAND BALANCIER COLLECTION IN 2012, THE DYNAMIC MANUFACTURE FROM CENTRAL SWITZERLAND INTRODUCES A NEW MODEL WITH A PARTIALLY CUT-OUT DIAL, GIVING THE WATCH A SUBTLE TECHNICAL TOUCH.

Quantième Perpétuel au Grand Balancier Open dial QP01.110.9

THE CASE

The case is hardly to be topped in terms of complexity. In order to showcase the wondrous interplay of polishing and satin finishing, this case was conceived to include detachable strap lugs. Thus, the recesses are polished to a high gloss, while the upper parts remain matte. The strikingly designed flanks, which lend the case its unique lines, are also individually secured. An unmistakable element of an ANTOINE MARTIN

ANTOINE MARTIN

swiss contemporary watch manufacture

watch is certainly the crown, which is reminiscent of classic Bauhaus design. This case in its entirety is a lavish construction comprising 84 individual components. It is made of stainless steel with a black bezel DLC treated (diamond like carbon coated).

THE MOVEMENT

A modified Swiss lever escapement called HPE (High Performance Escapement) that includes silicium ensures increased energy yield; the brand-new Aerodynamic Amplitude Stabilization (ADAS) guarantees an even rate; and this movement boasts a free-sprung balance spring, which is one of the prerequisites in attaining the Seal of Geneva. Manually wound Calibre AM 39.001, in which twin mainsprings ensure a power reserve of six days, is outfitted with a perpetual calendar and a large date. The visual cherry on top is the extra-large balance crafted in Grade 5 titanium boasting an incredible diameter of 17.5 mm.

THE DIAL

The dial includes five opening allowing a glimpse of the movement. This gives the watch a more technical and sporty touch. The indexes are composed of black luminova. The vertical placement of the perpetual calendar's day and month displays and the leap year indication at the 12 o'clock position were only possible thanks to a few new tricks up the engineers' sleeves.

VARIATIONS

This model is available in a stainless steel case with a black DLC coated bezel.

QP01.110.9

Quantième Perpétuel au Grand Balancier „open dial“

Hand-wound movement with six days power reserve

Case stainless steel with black DLC-coated bezel

Double anti-reflective sapphire crystal

Black rubber strap with deployment buckle

CHF 42'000.-
